

Abandonment & Decommissioning

In our experience, we have found the most important factor in a successful abandonment project involves coordinating field operations including all services and equipment in order to increase efficiency and reduce project costs. This is why our consultants stay in constant communication with both client and in-house technical teams to ensure cost control measures, well design, regulations, abandonment techniques and equipment bidding approaches meet the needs of our clients.

Barlon Engineering Can Provide:

- Landowner Notification Letters
- Regulatory Applications, Waivers, Reporting and Submissions
- Pre-Abandonment Field Inspections
- Cost Estimates
- Detailed Estimate Support including Site Specific & Field Estimates
