

Barlon Engineering

Utilizing the Barlon approach, operators save resources and costs, while continuing to be fully aware of each project parameter by engaging in operational methods and strategies designed to ensure efficiency and compliance. Established in 1982, Barlon Engineering has provided and continues to provide competent, reliable and cost conscious drilling, completions, well servicing and abandonment engineering management and field supervision services to companies operating throughout the Western Canadian Sedimentary Basin, Foothills, Northern BC, eastern Canada and numerous international regions.

From the initial stages of well planning to the abandonment and completion of your project, our team of engineers, wellsite supervisors and technical experts will ensure you have the resources to simplify processes, reduce costs and waste while completing your project on time and on budget.

The Barlon Team has a deep understanding of all relevant current and emerging industry regulations having experience with drilling, completion, workover and abandonment programs throughout North America and Internationally including: Alberta, British Columbia, Saskatchewan, Manitoba & North Dakota.

Barlon Engineering Provides:

- Wellsite Supervision & In-house Engineering
- Drilling & Completions Management
- Abandonment & Decommissioning
